

Dear Builder/Electrician,

Connexus Energy is continually striving to improve the reliability of our electric power to our members. Effective April 1st, 2020 the customer will be responsible for providing a PVC Slip Meter Riser for underground service risers to electric meters.

A Slip Meter Riser will eliminate problems that can occur when the ground settles after construction or when frost moves the conduit's ground positioning, which can cause the conduit to break.

The PVC Slip Meter Riser will need to be the correct size for the stand pipe. For a 200-amp service the diameter of the conduit is 2 inches; for a 400-amp service the diameter of the conduit is 3 inches.

Sincerely,

Nick Loehlein, P.E.
Manager – Engineering &
System Operations
